Federal Aviation Administration

Initial En Route Qualification Training

Instructor
Lesson 17
Longitudinal Separation

Course 50148001

LESSON PLAN DATA SHEET

COURSE NAME:	INITIAL EN ROUTE QUALIFICATION TRAINING
COURSE NUMBER:	50148001
LESSON TITLE:	LONGITUDINAL SEPARATION
DURATION:	8+00 HOURS
DATE REVISED:	2022-02
VERSION:	V.2022-02
REFERENCE(S):	FAA ORDER JO 7110.65, AIR TRAFFIC CONTROL
HANDOUT(S):	longpttask.f2k - LONGITUDINAL SEPARATION PART-TASK STRIPS
EXERCISE(S)/ ACTIVITY(S):	EXERCISE: APPLYING LONGITUDINAL SEPARATION
END-OF-LESSON TEST:	YES *(REFER TO ELT17.PDF)*
PERFORMANCE TEST:	NONE
MATERIALS:	NONE
OTHER PERTINENT INFORMATION:	LONGITUDINAL SEPARATION PART-TASK LAB WILL BE COMPLETED AT THE END OF THIS LESSON FOLLOWING A REVIEW OF NONRADAR LAB PROCEDURES.

☞ ***NOTE:*** *Review the Nonradar Lab Procedures handout with students before administering the Longitudinal Separation Part-Task Lab at the end of this lesson.*

☞ ***NOTE:*** *As you prepare for this lesson, recall and be prepared to talk about examples and personal experiences that illustrate or explain the teaching points in the lesson.*

INTRODUCTION

Gain Attention

In a previous lesson, you learned how to apply vertical separation. In this lesson, you will apply longitudinal rules between same courses and opposite courses aircraft using time and distance.

The en route controller, using a combination of vertical, lateral, and longitudinal rules, can safely and efficiently move aircraft through the NAS.

INTRODUCTION *(Continued)*

Opening Scenario

LONGITUDINAL SEPARATION

2

Longitudinal separation is a very important tool used by the controller to separate aircraft. There will be situations when the use of vertical and/or lateral separation rules becomes impossible. You **must** be able to apply the rules of longitudinal separation when the need arises.

Purpose

⊙ This lesson will cover rules and procedures concerning longitudinal separation between aircraft:

- On the same course
- On converging courses
- On crossing courses
- On opposite direction courses
- Changing altitudes

INTRODUCTION *(Continued)*

Lesson Objectives

LESSON OBJECTIVES

- On an End-of-Lesson Test, and in accordance with FAA Order JO 7110.65, you will identify longitudinal separation minima for aircraft on same, converging, crossing, or opposite-direction courses

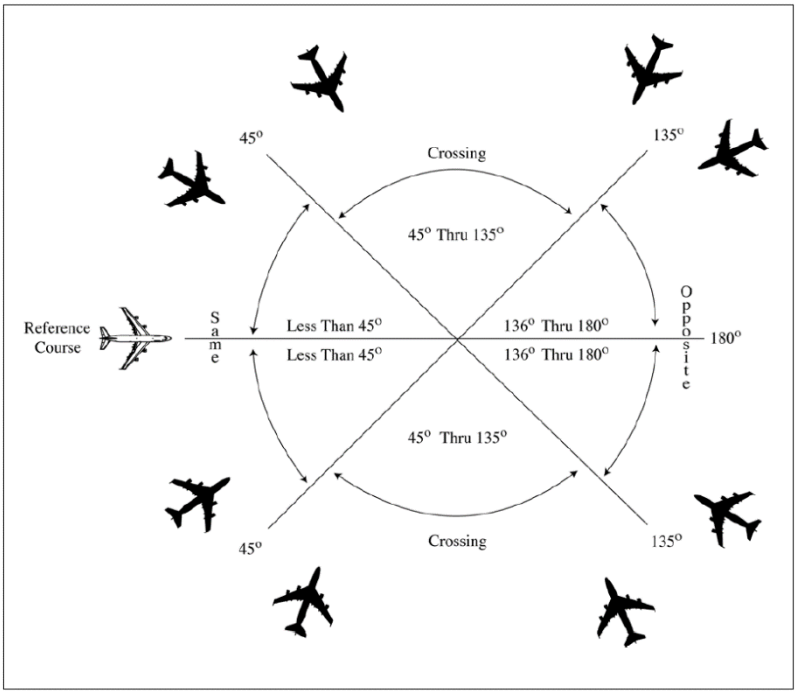
3

☞ ***NOTE:*** *Teach from graphic.*

COURSE DEFINITIONS

Courses Chart
JO 7110.65, par. 1-2-1

DIVERGENCE



4

Same Courses
JO 7110.65, par. 1-2-2a

Same Courses are courses whose protected airspaces are coincident, overlap, or intersect and whose angular difference is less than 45 degrees.

Crossing Courses
JO 7110.65, par. 1-2-2b

Crossing Courses are intersecting courses whose angular difference is 45 through 135 degrees inclusive.

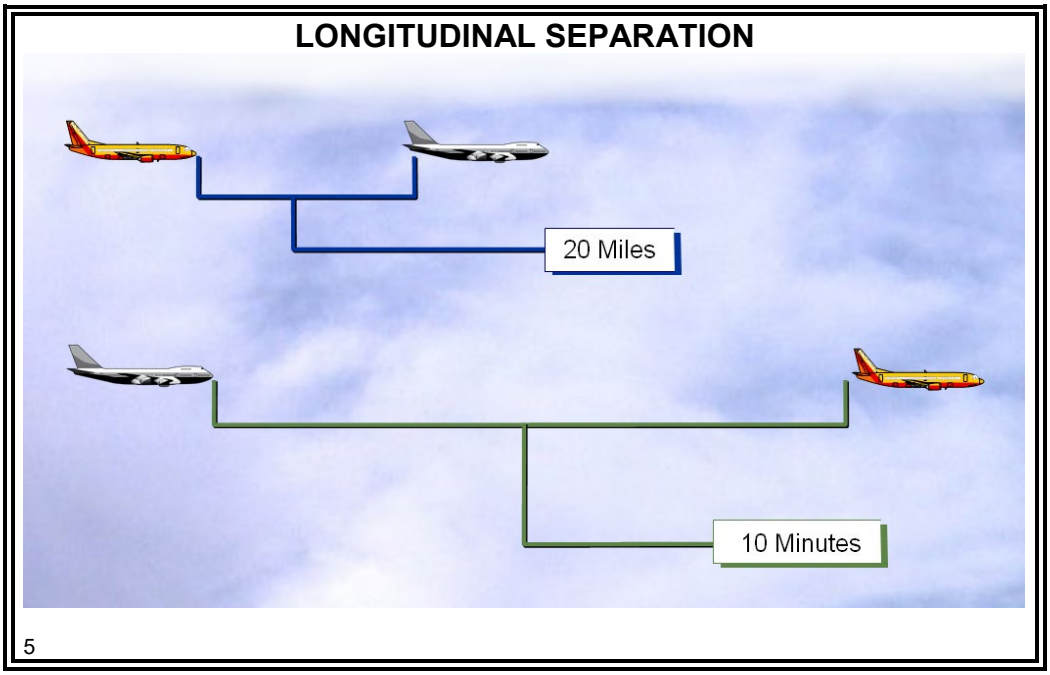
Opposite / Reciprocal Courses
JO 7110.65, par. 1-2-2c

Opposite/Reciprocal Courses are courses whose protected airspaces are coincident, overlap, or intersect and whose angular difference is greater than 135 degrees through 180 degrees inclusive.

NOTE: Later in this lesson “estimated to pass” minima on opposite courses will be covered. In Aero Center “estimated to pass” situations should be converted to vertical or lateral situations by using the alternate airways if possible. Tail to tail and DME passage rules for opposite courses will be demonstrated in part task exercises and scenarios.

APPLYING LONGITUDINAL SEPARATION

Longitudinal Separation Definition
JO 7110.65, Pilot/Controller Glossary



Longitudinal separation is the longitudinal spacing of aircraft at the same altitude by a minimum distance expressed in units of time or miles.

APPLYING LONGITUDINAL SEPARATION *(Continued)*

Methods
JO 7110.65,
par. 6-4-1

METHODS FOR LONGITUDINAL SEPARATION

Separate aircraft longitudinally by requiring them to use one of the following methods, as appropriate:

- Depart at a specified time
- Arrive at a fix at a specified time
- Hold at a fix until a specified time
- Change altitude at a specified time or fix

6

☞ ***NOTE:*** *Teach from graphic.*

☞ ***NOTE:*** *Inform students that the second method includes crossing a fix at or before or at or after a specified time.*

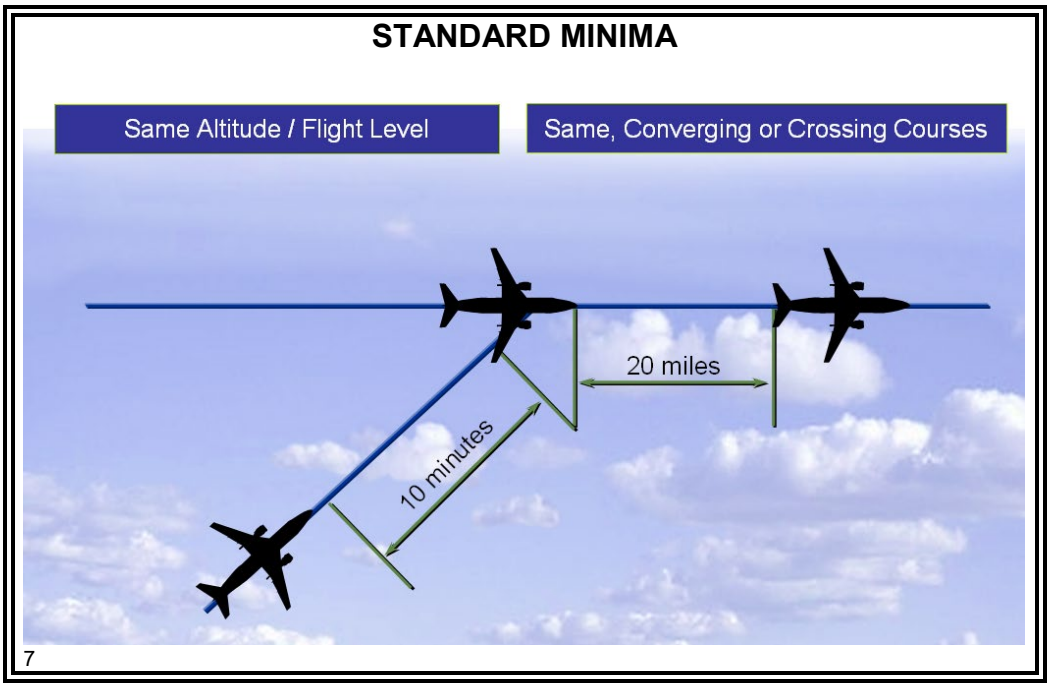
MINIMA ON SAME, CONVERGING, OR CROSSING COURSES

Mileage-Based Procedures
JO 7110.65, par. 6-1-1, Pilot/Controller Glossary

⊙ Use mileage-based (DME and ATD) procedures and minima **only** when direct pilot-controller communications are maintained.

📖 **Along-Track Distance (ATD)** is the distance measured from a point in space by systems using area navigation reference capabilities that are **not** subject to slant range errors.

Standard Minima
JO 7110.65, par. 6-4-2



⊙ 20 miles between:

- DME-equipped aircraft
- RNAV-equipped aircraft using ATD
- DME and ATD equipped aircraft, provided
  - DME aircraft is at or below 10,000 or farther than 10 miles from the DME NAVAID

NOTE: Using **"**Say DME" instead of "Say position" ensures all aircraft use DME mileages which allow all aircraft to have the same slant range error.

⊙ 10 minutes between all other aircraft

NOTE: **Must** coordinate with next facility/sector if **less than** 10 minutes.

Continued on next page

MINIMA ON SAME, CONVERGING, OR CROSSING COURSES *(Continued)*

Standard Minima (Cont'd)

NOTE: If an aircraft departs KJAN or KGWO and separation is needed at the MHZ or SQS VORTAC for other traffic, an airport departure time does not provide separation because the airports and VORTACs are not co-located.

You must solicit either a DME report or VORTAC/FIX report to ensure separation. If a MHZ or SQS VORTAC time is needed for separation on a departure aircraft, you must record the time in space 26 of the flight progress strip using the format MHZ/1210. If a current position report is solicited, you must record the time in space 26 of the flight progress strip using the format 15NW/1213 or 15NWSQS/1225.

SEPARATION WHEN AIRPORT AND VORTAC ARE NOT CO-LOCATED

N3GM C550A T350 66 01	EDC 1615	1605/ KGWO P1605	120	MHZ 120	KGWO SQS V9 MCB KMSY/0042 ZHU
N3GM C550/A T350 66 01	KGWO P1605 1605 +9	14 16 MHZ	120	MCB 120	KGWO SQS V9 MCB KMSY/0042
N54DB C172/A T150 66 01	EDC 1610	1600/1602 KJAN P1600	80 80	STUEE 1630 80	KJAN V18 MLU V94 KSHV/1705 MHZ/1605

8

- In this example, N54DB departed with a KJAN departure time of 1602. Greenwood Tower later requests a clearance for N3GM. After running the times out, there appears to be 12 minutes separation at MHZ . The KJAN Airport and the MHZ VORTAC are not co-located, but are 10 miles apart. Therefore, a position report is required to ensure separation at the MHZ VORTAC. This report must be solicited prior to issuing a clearance to N3GM.

MINIMA ON SAME, CONVERGING, OR CROSSING COURSES *(Continued)*

Knowledge Check (Cont'd)

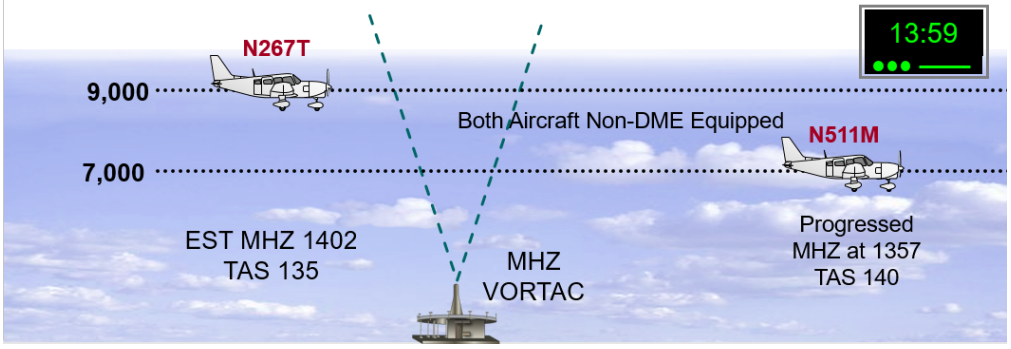
KNOWLEDGE CHECK

QUESTION: At 1359, N267T requests 7,000. The controller should _____.

A. assign 7,000 after N267T reports Magnolia

B. clear N267T to 7,000 at 1402

C. advise N267T unable 7,000



10

☞ **NOTE:** *Click once to show answer.*

ANSWER: *C*

☞ ***NOTE:*** *10 minutes does **not** exist between these two non-DME equipped aircraft.*

Continued on next page

MINIMA ON SAME, CONVERGING, OR CROSSING COURSES *(Continued)*

Knowledge Check (Cont'd)

KNOWLEDGE CHECK

QUESTION: What is the earliest time N22L may depart and climb to eight thousand?

N22L AC68/A T175 66 01		↑ KGWO P1620		MHZ 80	KGWO SQS V9 KMCB/0055	
N52B C310/A T180 66 01		T→SW-SQS ↑ 1610/1615 KGWO P1615	↑80	MHZ 80	KGWO SQS V9 KMCB/0055	D-A

11

☞ **NOTE:** *Click once to show answer.*

ANSWER: *1625 or a report indicating 20 DME*

☞ ***NOTE:*** *20 DME is necessary to maintain standard longitudinal separation.*

MINIMA ON OPPOSITE COURSES *(Continued)*

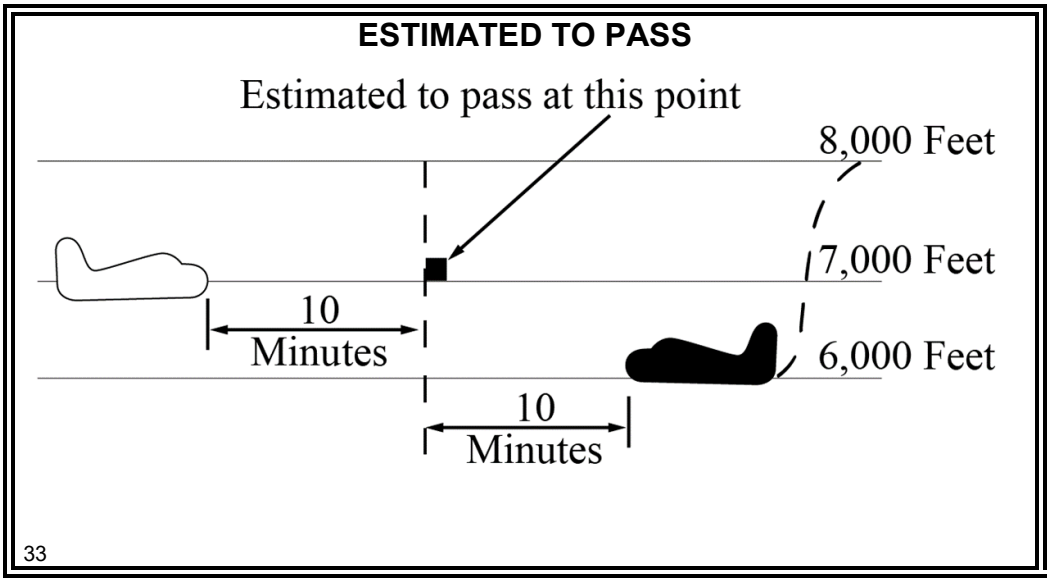
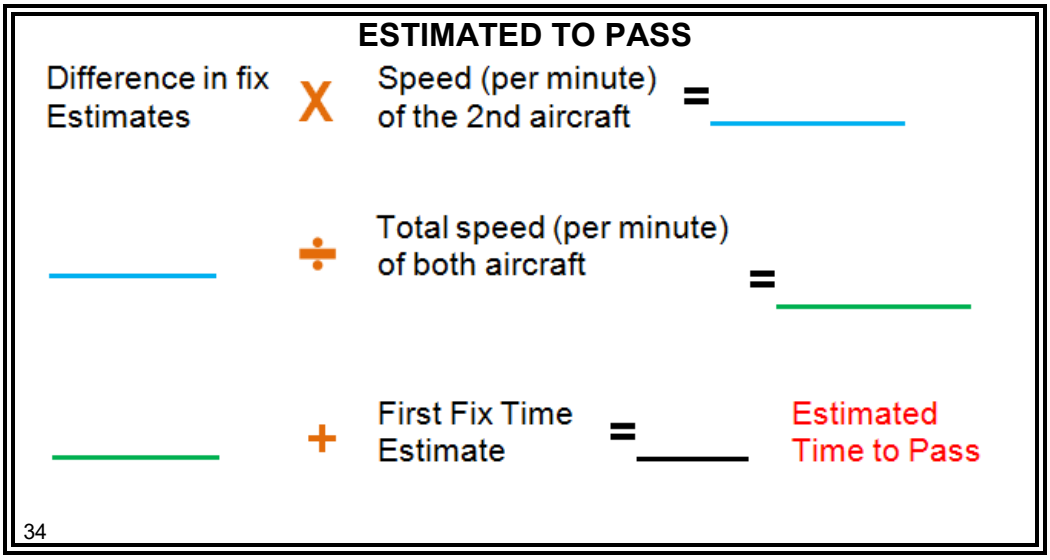
Estimated to Pass Point
JO7110.65, fig. 6-4-19



Estimated to Pass
JO 7110.65, par. 6-4-3

- Separate aircraft traveling opposite courses by assigning different altitudes consistent with the approved vertical separation from *10 minutes* before, until *10 minutes* after they are estimated to pass.

Formula



- Formula to calculate “estimated to pass”.

Continued on next page

MINIMA ON OPPOSITE COURSES *(Continued)*

Estimated to Pass (Cont'd)

⊙ The strips below demonstrate how to use the formula. N33T progressed STUEE at 2336 and requested descent to 70. Coordination with sector 65 has been completed.

☞ ***NOTE:*** Display slide 34 as the calculations to the strips below are completed.

N33T C182/A T120 66 02	STUEE 2336	14 00 14 MHZ	90✓↓70 70 > 2356 70	MEI	KSHV ./. MLU V18 KMEI	
N22B C421/A T240 66 01	MEI 2344	02 00 03 MHZ	80✓	STUEE	KMEI V18 MLU KSHV	

Calculation

12 x 2 = 24
24 / 6 = 4
0002 + 4 = 0006 est. to time to pass

Questions

⊙ At time 0006 where is N22B?

ANSWER: 16 SW

⊙ At time 0006 where is N33T? ANSWER: 16 SW

Solution

⊙ The planes are vertically separated at 9 thousand and 8 thousand respectively, to use longitudinal separation to allow N33T to descend to 7 thousand a time restriction 10 prior to the estimate to pass is required.

⊙ "…DESCEND SO AS TO REACH SEVEN THOUSAND BEFORE TWO THREE FIVE SIX..."

NOTE: In Aero Center "estimated to pass" situations should be converted to vertical or lateral situations by using the alternate airways if possible.

EXERCISE: APPLYING LONGITUDINAL SEPARATION

Exercise

APPLYING LONGITUDINAL SEPARATION EXERCISE

Purpose: to practice applying longitudinal separation rules

Directions: use longitudinal separation rules and provided aids to answer questions and issue clearances

35

Directions

For questions 1 through 6, record clearance instructions and any other necessary data on the flight progress strips. Write the steps you took to resolve each situation in the space provided.

Continued on next page

EXERCISE: APPLYING LONGITUDINAL SEPARATION
(Continued)

Questions

QUESTION 1 – 20 MILES DME

AAL5 B732/A T450 66 04	ZAMMA 1840	47 18 47 | 1847 MHZ	160✓	HEZ 1858	KBHM IGB V245 HEZ V71 KBTR	ZHU
UAL20 B732/A T450 66 04	MEI 1835	44 18 42 | 1844 MHZ	140✓	HEZ 1855	KBHM MEI V18 MHZ V245 HEZ V71 KBTR	ZHU

36

1. AAL5 is requesting 14,000. Write the DME separation required and the procedure you should use to determine if separation exists.

   ANSWER: *First obtain DME position on UAL20, then AAL5. If 20 miles DME exists, descend AAL5 to 14,000.*

N142B BE20/A T270 66 01		↑ KGWO P1200		MHZ 140	KGWO SQS V9 MCB V555 PCU KGPT/0050

37

2. AAL5 reported SQS VORTAC at 1201. N142B requests clearance from KGWO Airport at 14,000. When can N142B depart?

ANSWER: *Immediately by the 44 Knot Rule (5 miles). GWO is 10 miles from SQS. N142B must be cleared over SQS VORTAC.*

3. Using the flight progress strips in question 2, determine the minimum longitudinal separation that can be used for N440D to depart after N142B.

ANSWER: *5 minutes/10 miles by the 22-Knot Rule if N142B has reported leaving 10,000; or 10 minutes/20 miles if* ***no*** *report has been received.*

EXERCISE: APPLYING LONGITUDINAL SEPARATION
(Continued)

Questions (Cont'd)

QUESTION 4 – OPPOSITE DIRECTION DME REPORT

N25T BE9L/A T195 66 02	STUEE 1602	25 16 25 MHZ	90✓	KJAN	KTXK EIC V18 MHZ KJAN/1627 27SW/1616	H NW
N33Y C310/A T180 66 02	MEI 1520	10 16 10 1610 MHZ	100✓	STUEE 1635	KMEI V18 MLU KELD/1700	

38

4. N33Y is requesting 8,000 feet. Based on the information gathered from the flight strips of N33Y and N25T, what procedure should be followed to provide descent and separation from N25T using DME?

ANSWER: *Have N33Y maintain 10,000 until 27 miles Southwest of Magnolia VORTAC; then descend to 8,000.*

Questions (Cont'd)

QUESTION 5 – OPPOSITE DIRECTION INTERSECTION REPORT

AAL14 B752/A T480 66 02	STUEE 1717	27 17 27 MHZ	170✓	MEI 1736	KTXK MLU V18 MEI KATL HEDUD/1724	
UAL22 B722/A T480 66 02	MEI 1711	20 17 20 1720 MHZ	160✓	STUEE 1730	KBHM MEI V18 MLU KELD HEDUD/1723	ZFW

39

5. UAL22 reported HEDUD intersection at 1723. AAL14 reported HEDUD at 1724. What is the earliest time AAL14 can descend to 15,000?

   ANSWER: *1725. Descent clearance can be issued when 3 minutes of flying time exists between the two aircraft.*

EXERCISE: APPLYING LONGITUDINAL SEPARATION
(Continued)

Questions (Cont'd)

QUESTION 6 – OPPOSITE DIRECTION COURSES REROUTE TO USE LATERAL SEPARATION

AAL536 B737A T410	MHZ 0016	24 00 SQS	150 ✓	HLI	KMSY ./. MCB V9 SQS V535 HLI ./. KEVV	
AAL528 B737/A T410	HLI 2349	02 00 03 SQS	140 ✓ ↑160 140 / 17SE X 17NE MHZ@160	MHZ 0010	KTTH ./. HLI V535 SQS V9 MCB ./. KBTR V555 MHZ	

40

6. AAL528 checks on frequency at 140 estimating SQS at 0003 requesting climb to 160. This separation can be solved by rerouting AAL528 and applying lateral separation. Lateral separation is the next lesson, so the required restrictions are given. What is the phraseology to reroute AAL528 and issue the restrictions/climb?

ANSWER: *AMERICAN FIVE TWENTY EIGHT CLEARED TO THE BATON ROUGE AIRPORT VIA AFTER SIDON VICTOR FIVE FIFTY FIVE MAGNOLIA REST OF ROUTE UNCHANGED, MAINTAIN ONE FOUR THOUSAND UNTIL ONE SEVEN MILES SOUTHEAST SIDON VORTAC, CROSS ONE SEVEN MILES NORTHEAST MAGNOLIA VORTAC AT AND MAINTAIN ONE SIX THOUSAND.*

IN CONCLUSION

Lesson Review

LESSON REVIEW

The following topics were covered in this lesson:

- Applying longitudinal separation
- Minima on same, converging, or crossing courses
- Minima on opposite courses
- DME longitudinal separation for RNAV aircraft along VOR routes

41

☞ **NOTE:** Teach from graphic. Review and elaborate briefly on the topics covered in this lesson.
